

WANT TO BUILD YOUR OWN WIND TURBINE?

Weekend Course, 8th - 10th June at Hill Holt Wood in Lincolnshire.

We run through as much of the wind turbine building process as possible, so that on Sunday afternoon, we erect a finished turbine, which we've mostly made ourselves.

The course is hands-on, so those who come will get experience carving blades, hand winding copper coils, working with magnets, setting resins and welding. This is an introductory course for anyone who is thinking of building their own turbine as well as some hands on fun for anyone who is interested in wind.

The full cost of the course is £200, including food for the weekend. Discounts are available on request. The price is to cover the cost of parts for the turbine, food, instructor's wages and a fee we pay for use of the space.
